

# MACHINIST

## What do Machinists do on the job?

Read and interpret engineering drawings, blueprints, charts and tables or study sample parts to determine machining operation to be performed

Verify product dimensions are accurate and conform to required specifications using precision measuring instruments

Work with metals and other materials, and operate lathes, milling machines and other tools to produce shapes to a required finish and size

Set-up, operate and maintain a variety of machine tools that cut or grind metal and other materials into products with precise dimensions
